

Grading criteria for master's degree projects in landscape architecture - *Outdoor environments for health and wellbeing*

EX0858 Guiding principle for grading: For a project to get any of the higher grades (4 or 5) all criteria for the lower grades need to be fulfilled. (2018-08-03-FRONTIER)

		Grade 5					
		Plan and carry out all steps in a study on the interaction between people and environment with the steps taken well documented and motivated. <i>It is a transparent process characterized by inventiveness in its design/implementation.</i>	Analyse and interpret data in a systematic, <i>nuanced and trustworthy</i> manner with relevant elaborations <i>and presented in a format well adapted to the content.</i>				
		Grade 4					
		Plan and carry out all steps in a study on the interaction between people and environment <i>with the steps taken well documented and motivated.</i>	Analyse and interpret data in a systematic manner <i>with relevant elaborations.</i>	Draw relevant <i>and well justified</i> conclusions to theory and practice.	Present project in a complete and <i>well-written</i> report with a correct list of references. Present the report orally and evaluate another student's report.		
Grade 3		Identify a problem related to people and environment interaction and formulate a particular query which is possible to investigate.	Identify ethical considerations related to the topic with elaboration on the particular measures taken in the project.	Plan and carry out all steps in a study on the interaction between people and environment.	Analyse and interpret data in a systematic manner.	Draw relevant conclusions to theory and practice.	Present project in a readable report with a correct list of references. Present the report orally and evaluate another student's report.
Aim	Ethical considerations	Research design and method	Results	Conclusions	Presentation
